

57. analogies, Tillandsia like Lichen. (179) (534)
63. Rubiments of many organs, a so called gland
143. ~~abnormal~~ ^{stata} organ in clop, variable
- 153
145. good case of Balancement: 199. - 619 (2)
- 183 (2) in individuals androgen & difference in clop.
226. spine turning into branches.
301. on papages being ² general, 508 stronger. - 541. do
407. Rule of column (same for var. & species.)
413. Embryology in plants irregular flower at first regular
442. rudimentary stamens - 475 & Pistils: 637
- ~~446 var. in individual & difference in seed?~~
- 448 on anthers of Asclepias
516. two kinds of placentation in same genus,
characterizing two sections of genus. = papage & young
papille. =
548. do on ovules
- 572 a multitude of flowers are unipetalled in bud.
strong case of - in. Gordenia
- 617 seems to think multiplication sign of highness
^{under description allude to Ch. 7 & this is a very abstract part. variable}
711. Genus not natural when founded on one character
- 754 on classificatory value of different parts of seed; it is
in fact embryology.
- 756 on great difference ⁽⁵⁴⁹⁾ in cotyledon in 3
allied plants, showing no character is constant.

(534)

(2)

- 761 ash 500,000 seeds.
- 763 introduced plants into S. America
- 782 } on value of characters, according as it
784 } allie itself with them, which is inferred
simply from being constant
- 786 on value of characters good - embryo most
important, yet it is a whole
- 787 direction of embryo in Helianthemum is different
- 788 good showing that physiological importance no
rule, because importance of all character variable.
- 789 Remarks on Mirbel's view on clefification.
- 791 on High & low plants good his remark ⁸¹⁴ 793, n
- 793 on series not being linear
- 815 good case of impossibility of arrangement
- 818 monstrosities are only anomalies of the species (2)
821. Clefification of varieties.
- 826 no resemblance of embryo in plants as in animals
- 834 Important organs may vary in
early stages: hypoglossis. - 836
compare I then on some Raddes in
VH on Fuchs
